

Web Development Immersive

In this 900 hour course, students become junior-level developers through full immersion in a project based learning approach. Students will build several applications, from simple websites, to full-stack applications, to larger distributed applications in a team setting which the students will learn how to monetize. Students will develop their own ideas into functional web applications while creating a portfolio of their first several applications. Students will learn how to be professional full-stack developers capable of building a scalable product with a team of developers. Students will be tested on material through in-class assignments, homework assignments
